

# Admin Notes

## Getting started: create, edit and delete pages

To **add a page**, just go to any page where you want a reference, and create an internal link with the new page title such as: `[[My New Page]]`, and save. The new link will appear in red: . Click on your new link to open the new page, and then click on **Edit this page**.

To **delete a page**, remove all content from the page, and then click **Save**.

You can always click on **Old revisions** to get back previous text.

## Helpful plug-ins

This dokuwiki has preloaded several plugins which are very helpful to format your documents.

### Header3

Allows markup syntax in the header and keeps your linebreaks like you entered them in the editscreen.

<https://www.dokuwiki.org/plugin:header3>

### Wrap

Universal plugin which combines the functionality of many other plugins. Wrap wiki text inside containers (divs or spans) and give them a class (choose from a variety of preset classes), a width and/or a language with its associated text direction. <https://www.dokuwiki.org/plugin:wrap>

### dw2pdf

Puts an "Export to PDF" action in the common right-side menu. You don't need to do anything.

<https://www.dokuwiki.org/plugin:dw2pdf>

### buttons

You can put customizable buttons on your pages. <https://www.dokuwiki.org/plugin:button>

## showif

Hides content from users that aren't logged in. <https://www.dokuwiki.org/plugin:showif>

## statdisplay

This plug-in will analyze the nginx access log and produce stats.

<https://www.dokuwiki.org/plugin:statdisplay>

## tablewidth

Set the width of table and columns. [\\*\\*https://www.dokuwiki.org/plugin:tablewidth++](https://www.dokuwiki.org/plugin:tablewidth++)
