

App Properties

The selections under Application Properties will set properties for the whole app.

App Description	This describes the app for your own needs.
Set Page Transition Type	Choose from slide, fade, pop, flip turn, flow, slidefade, slideup, slidedown. The default is slide.
Set Main Design Type for App	The choices include iPhone, iPad, Android Phone and Android Tablet. Custom canvas images are displayed for each selected device type that provide accurate frame displays with placement accuracy to 1 pixel on the final device page.
App Background Image	Choose among 67 attractive prepared backgrounds or upload your own custom image background for your app.
App Background Color	Choose a custom background color.
App Navigation Bar	The app navigation bar enables users to jump to a page by tapping on a navigation item in the bar. The navigation bar will appear on every page of your app. You can set the bar to appear as a header or footer in your app. To define a navigation item, give it a name, enter the item title, pick from many predefined icons or upload your own and then select or enter the page name to go to.
Custom HTML Header	You can put any type of header HTML in your hybrid and web app including scripts, styling, Google Analytics, external web service calls, library plugins and others. Put all of your HTML elements together in one custom header. You can assume a JQuery context for your scripts. You can also refer to your Studio fields and buttons in your javascript.
Setup Push Notifications	This sets up Push Notification for your apps using Urban Airship.
Setup Near Field Communications	This sets up near field communications interactions for mobile devices that support it
The following set properties for Web Apps only	
URL Account Identifier	This name is required for Web Apps to host your app uniquely in our hosting environment. For security purposes, we don't recommend using your account username.
