

International Languages

ViziApps supports international languages for fields that display texts. These fields include:

- Label
- Text Field
- Text Area
- Button
- Table View
- Picker
- Navigation Bar
- HTML Panel
- Slide Panel
- Text in the Custom HTML header

Note that for the following entries, non-Latin characters are not supported:

- App Page Names
- Field ID's
- Javascript not in the Custom HTML header

App Names on the Test Platform require Latin characters, but App Names for Publishing can be any international characters.
