

Salesforce.com

Your mobile device can directly interface with Salesforce, using visually created query commands in a graphical tree. The query commands include insert, update, select and delete.

These commands will run when a user taps a button or table row on your device.

Create A Connected App in Salesforce.com

To enable your app to connect to Salesforce Objects, your Salesforce account needs to have a registered API and your mobile app needs to know some of the API information :

1. Login to your Salesforce account.
2. Click on your login name on the top right of the web page. → **Setup**.
3. On the left navigation bar under App Setup, click **Create → Apps**
4. On the bottom, click **New**
5. Fill in the Basic Information. Then check **Enable OAuth Settings**. Enable the following settings:
 - Provide access to custom applications (visualforce)
 - Perform requests on your behalf at any time (refresh_token)
 - Access your basic information (id)
 - Provide access to your data via the Web (web)
 - Access and manage your data (api)
 - Access and manage your Chatter feed (chatter_api)
 - Full access (full)
6. For the Callback URL enter **<https://viziapps.mobi/PageData/SalesForceAuthorize.aspx>**.
7. For **Selected OAuth Scopes**, add the scopes appropriate for your account. These determine what your mobile app can access in your account. Click **Save**.

Register The Salesforce Connected App Into ViziApps

When you are done registering your API for Salesforce, go to your ViziApps Studio and create a Data Source ID.

1. Enter the **Consumer Key** and **Consumer Secret** from your Salesforce app API and click **Login**. If you are not logged into Salesforce, login.
2. Enable access within the popup. ViziApps Studio will then get the Objects Schema in your account and display a list of your Objects. This will take about a minute. Just wait.
3. A message should be displayed for a successful saving of your Objects Schema. Close the dialog.
